

CommuniGate Pro – Instant Messaging

A Component of the CommuniGate Pro Enterprise Suite

Instant Messaging (IM) is wildly popular with home users and kids who like to be connected to their mobile friends. It allows home users to keep in touch with faraway family members and friends in real-time with more immediacy than e-mail.

CommuniGate Pro provides enterprises full Internet Communications with one address (user@domain.com) allowing any one, any place to use various forms of rich media communications – from e-mail to collaboration, VoIP, Instant Messaging and applications like voicemail and conferencing, all without concepts of toll or location.

Benefits for your business effectiveness

Immediate communications

E-mail communication may be fast but with IM the response is immediate and via presence information users see who is online and available.

Better information

Users can talk on the phone with a customer and in parallel use IM to check with internal technicians, and support for background information.

Substituting conference calls

When two users are communicating via IM and need more expertise, with one click others can be added to the IM conversation. This saves costs and time for scheduling conference calls, and checking availability of people needed on the conference call.

Mobility

IM can be used via web-based clients such as CommuniGate Pro's Pronto! from any browser in the world.

Replacement of brief phone calls

IM substitutes short phone conversations and saves telephony costs.

Linking with remote work forces

New team members can easily be added to the buddy list and included in the corporate information flow to increase productive communications.

Security

Encryption and compliance for secure Instant Messaging.

Pronto! Flash Interface

CommuniGate Pro Instant Messaging provides a standards-based, real-time communication and collaboration application as well as a platform for presence-based application development. As both an application and a platform, it provides the reliability and availability expected by end users and the security necessary to protect privacy and information to meet regulatory requirements.

CommuniGate Pro Instant Messaging Supports:

- Windows Messenger
- Trillian
- Pandion
- SIP/SIMPLE Clients
- XMPP Clients

About CommuniGate Systems

CommuniGate Systems develops carrier-class Internet Communications server software for broadband & mobile service providers and OEM partners worldwide. CommuniGate Pro is recognized as the clear leader in providing carriers with rich applications and mobile solutions that increase the subscriber value potential and increase retention rates. CommuniGate Systems also serves corporations via 175 channel partners worldwide with its Enterprise Suite. Addressing both markets provides the company with profitability and independence and ensures that the company's strategy stays in scope with the industry. CommuniGate Systems drives standards in Internet Communications and is actively contributing to associations like SPEC, MultiService Forum, Internet2, Mobile Ignite and Open Mobile Alliance.
