World-class quality  
Ultra-competitive prices  
Western management

WWW.SITEX-SOFT.COM

Are you searching for an offshore provider that performs world-class quality work at ultra-competitive prices?

Well, your search is over. **Sitex Software** is now offering its full-range of IT service to organizations in Europe.

## Ability and Experience

Sitex is the result of combining the technical skill and expertise of Russia with the familiar management style of the West (United States and Germany).

Add to this the company's **experience** and **success** in the European market, and you quickly realize why Sitex is unique.

Sitex is ready to undertake all phases of your development projects, including analysis, projection realization, testing, documentation, translation, hosting, and more. **The vast majority of Sitex projects are fixed fee.**

Early in the engagement cycle, from initial contact to project kick-off, you will interact almost exclusively with a **Western manager** who has excellent experience working in Russia and the West.

During the remaining project phases, when it is most crucial to project success, you will have the opportunity to work directly with Sitex' experienced, university-trained developers.

Sitex, as a rule, uses an **incremental and iterative method** when developing applications. As a client, you will receive preliminary builds or versions relatively frequently. You are encouraged to participate actively in the development process and communicate your ideas.

## We Speak the Same Language

To aid cooperation, all Sitex team members can communicate effectively in **English** and German.

By locating its operations office in the Russian city of Krasnoyarsk, Sitex is able to offer its unique combination of service and price. This is due to the availability of **high-caliber, experienced technical professionals** and the city's low cost of living.

Krasnoyarsk (pop. 950,000) is a significant scientific, industrial, and educational center in Siberia and is the capital of the Krasnoyarsk region. In addition to the city's 19 colleges and universities, the city and region boast of having the world's largest aluminum production plant, a **center for the development of aerospace technology**, and the world's most productive nickel mine.

## Satisfaction Guaranteed

Contact Sitex today to find out how its world-class IT services can help your organization. Visit [www.sitex-soft.com](http://www.sitex-soft.com) to read comments from satisfied clients, to review descriptions of projects successfully completed - on budget and on time, and to request a free project proposal.

"I would like to express my compliments to Sitex. I have been in the IT business over 25 years, have managed a team of more than 30 programmers but have never, ever seen a software of such a nice quality in the first test round! Very, very well done. Testing is a breeze!"  
-- Manfred Gahr, Managing Director, Provis GmbH (Waltrop, Germany)
