Don't ask about our product range!

Our range is based on your requirements and not the other way round.

Our partners can depend on our assistance in helping them to procure the identification devices of their choice.

Fis is not constrained by its own manufacturing capacity and product line. Numerous partnerships, including leading global manufacturers, ensure a virtually unlimited delivery capability.

We will supply you with individual prototypes just as reliably as for a production run of one million.

Our diverse network of technology partners enables us to develop unique solutions.

Larger companies require a precisely defined corporate design ensuring a consistent image independent of the ordering branch.

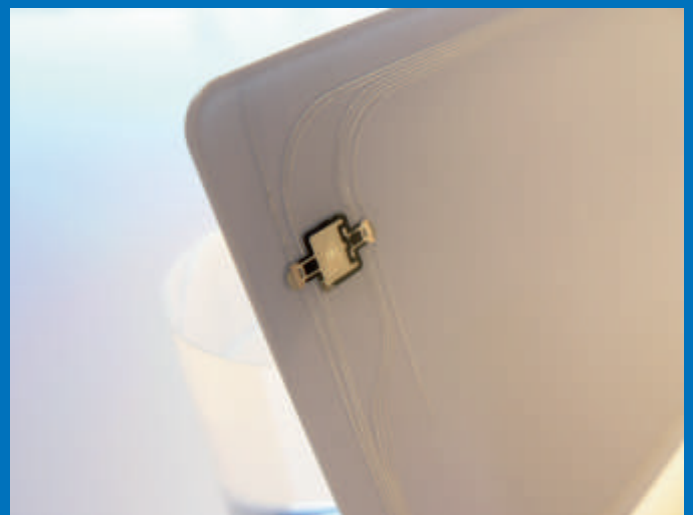

Fis not only offers the possibility of precisely aligning the relevant identification device with the company's CD but if so requested can also monitor comprehensive branch compliance with CD rules to avoid inadvertent variations caused by decentralised ordering.

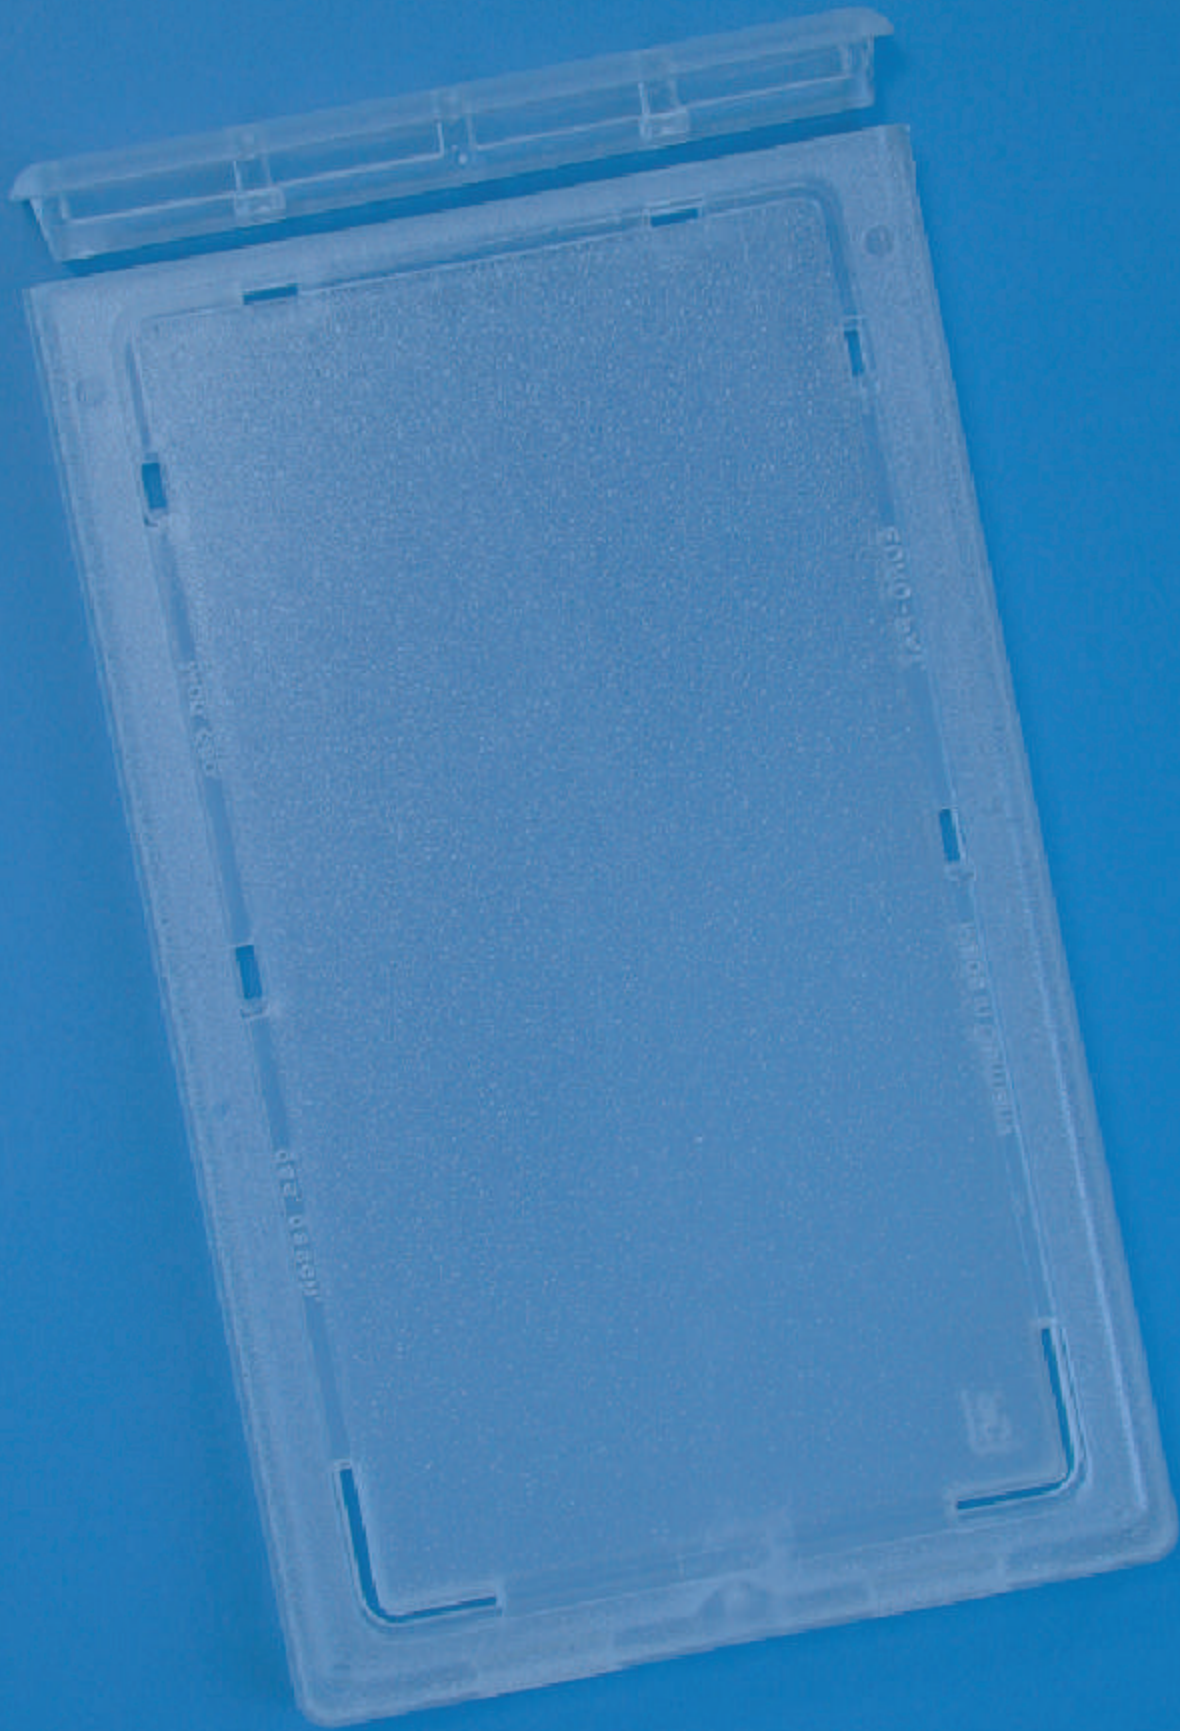

Numerous chain stores and global players are already taking advantage of this special Fis service.

For many, the identification device is only a piece of plastic whereas it is in fact a perfectly manufactured precision instrument subject to the most stringent requirements. Ultimately it is often critical to the security of investments worth millions.

The diverse range of uses requires extensive know-how on the part of the manufacturer. For example, a card manufactured for the European market can only be used in harsher climatic conditions to a limited degree.

This is where Fis, with its 27 years of experience of supplying approximately 30 countries, can protect a partner from unpleasant surprises.

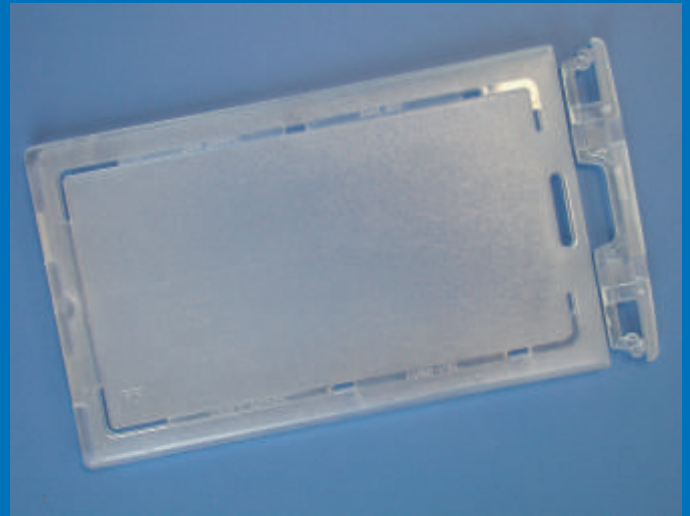

FULL IDENTIFICATION SERVICE!

Our reputation is built on range....

Our service is not designed to sell you a new set of identification devices at the earliest possible opportunity but to provide lasting protection for your investment.

Although we always employ state of the art technology when manufacturing our identification devices that does not make them indestructible. For example, resourceful employees like to use the precision instrument that is an RFID card as an ice scraper.

That is why we maintain one of Europe's most extensive ranges of protection and carrying accessories. Just for you.

Protection and carrying accessories need not look as uninspiring as the name suggests.

We offer numerous opportunities for aligning your accessories with your corporate design.

This may involve printing them with a customer-specific design or else making a specially coloured case.

It is by no means rare for these accessories to become real eye catchers and find their way into the advertising departments.

We are only too happy to provide you with detailed information.

Our service does not end with delivery of the identification device; it then enters the next stage.

We can supply you with badge printers and consumables right through to the complete badge production and management software; all you need to do is personalise your badges on site.

You can choose the system that best suits your requirements from an extensive range of the most prestigious printer manufacturers.

Please ask for our comprehensive information pack.

History

1979 saw the creation of FIS Organisation GmbH by Paul Fischer und Sigurd Schreiber, who brought with them practical experience dating back to the invention of the original plastic ID badge.

Building on this platform of experience, FIS Organisation GmbH quickly developed into one of Europe's leading system houses for identification devices.

Many of the access control industry's resellers and system houses have put their trust in FIS and deployed FIS's well known FISCard as original equipment.

1979

1997 saw 100% of FIS Organisation GmbH acquired and personally managed by **Peter Schreiber**, the top manager of a Group with global operations.

As a result, FIS's expertise grew to encompass a profound understanding of the particular needs of Groups, chain stores and system houses with global operations.

Many Groups appreciated the benefits of FIS's special services and publicly nominated FIS as their partner.

FIS's product portfolio experienced dynamic growth keeping pace with customer requirements because FIS sees itself as a partner who never lets its customers down, even in exceptional circumstances.

1997

2005 saw FIS's management strengthened by the arrival of RFID professional Torsten Becker and IT expert Peter Seeck in order to meet the increased demands and new opportunities of the changed market place.

Shortly thereafter it was decided that the company would reassert itself as the visionary leader of progress in the security technology field and bring together what until that point had been the entirely separate areas of electronic and physical security.

In pursuit of this idea, a partnership was sought and achieved between Aladdin, the world market leader for electronic security technology and FIS as the physical security technology counterpart.

2005

IN SHORT.

For people in a hurry

- More than 26 years of experience
- System independent advice
- All current card technologies
- Specially constructed transponders also available
- Development of customer-specific solutions
- Production runs from 1 to 10,000,000 units
- Extensive range of accessories
- Badge printers and software
